Your NIGHTSEARCHER PANTHER Rechargeable Lamp has been designed to provide you with excellent performance for years.

## **CHARGING INSTRUCTIONS** for NIGHTSEARCHER PANTHER:

To recharge simply connect the Jackplug into the Nightsearcher Panther and plug the charger into the mains. The red LED light will come on to show it is charging and turn green when fully charged. Recharging time is approximately 12 hours if completely discharged or pro rata if not.

## **WARNING**

A 10Amp screw-in external safety fuse is provided and needs to be inserted before use. This should always be removed before packaging and / or transit to prevent the lamp from accidentally switching on.

Please bear in mind that this is high-powered professional lamp, which generates considerable heat if left switched on in a confined space.

Store in a safe place and away from children.

Always recharge after use. Never leave the lamp in a discharged state. To do so could damage the battery and could result in the battery needing to be replaced. Do not switch the lamp on whilst charging or for the first five minutes afterwards as the charging voltage is higher and is likely to blow the bulb or reduce its life. Please ensure you use the correct replacement 12v x 20w and 12v x 50w Halogen bulbs, available from your local stockist .

The charging unit is CE Rated and should only be used indoors.

## **REPLACEMENT PARTS**

Should you require replacement parts for your lamp, it is essential that only the correct spares are purchased from your stockist.

## **PART NUMBER**

12v Mains Charger for NS Panther	CH12VNS

Replacement Lens for NS Panther	SPPANLENS
Replacement Lightfront for NS Panther	SPPANLF
Replacement Reflector for NS Panther	SPPANREF
Replacement PCB for NS Panther	SPPANPCB
Replacement 10amp Fuse for NS Panther	SPPANFUSE

## **HELPFUL HINTS**

**TO CHANGE BULB:** Unscrew the lightfront of the Panther and pull away from the case. Pull the bulb directly out of the holder. Care must be taken not to touch the bulb with bare hands, as this will impair the performance and life of the bulb. Refit new bulb into holder, and refit the lamp in reverse order as taken apart.

**TO CHANGE THE BATTERY:** Open the lamp as described above to gain access to the battery.

Lift the battery out of the lamp. Pull off the crimp connectors and push onto the new battery, ensuring correct connection, i.e. RED to POSITIVE, BLACK to NEGATIVE. Refit in reverse order as taken apart.
